Programming Languages	Core Java + Advance Java , Python – Numpy, Pandas, Matplotlib, Scipy, MySQL , C++, CSS, JavaScript.
Tools & Platforms	Git, GitHub, VS Code, IntelliJ, Vercel, Jupyter Notebook.
Qualities	Hard working, Logical, Curious & Collaborative, Critical Thinking & Analysis
Hobbies	Star-gazing, Researching, Poetry, Chess, Web-surfing.

PROJECTS

Text-to-web based translator | [Source Code](#) | [Live-Demo](#)

July 2023

- I realized that **no other page or app** provided the facility of **translating texts above 5000 characters**, so I created a silly but smart way of translating texts which are too long.
- Not even google translate allows translation of contents above 3900 characters for google translate (web) & google translate app - 5000 characters.
- Created a website which takes **input of your texts** and creates **web-text page in separate tab** this makes it possible to use **in-built browser translation and overcome the limitation of 3900/5000 characters imposed on users**.
- Inspired by the problem faced by my mom when she received WhatsApp messages in different languages and long in nature which cannot be entirely translated by google app or web.

DG Services | [Source Code](#) | [Live-Demo](#)

Dec 2023

- Developed a content-driven website for **DG Services a Home appliance repair business** to showcase their products & services and mainly create online presence of their business.
- Utilized **Html, Vanilla CSS & JavaScript** for styling and provide a seamless user experience.
- Incorporated **responsive design** for **mobile app** as well as **desktop**.
- Deployed the website using **Vercel**, leveraging its global CDN network for fast and reliable delivery to users worldwide.
- **Implemented SEO** best practices for resulting in successful indexing on Google search & improved visibility.

Wall-E Assistant | [Source Code](#) | [Live-Demo](#)

Feb 2023

- Built a console based **assistant** capable of **running applications** present on your system, **send mails**, and **carry out google searches** on the console itself.
- Used **Python** and few **modules** and **libraries** like **Selenium, Pyautogui, Smtplib** and **date-time** supported by it.
- Incorporated numerous functions and aligned the methods of modules inside the function.
- Capable of using the assistant at personal scale for daily basis.

Two-Wheels-On-Rent | [Source Code](#) | [Live-Demo](#)

Jan 2024

- Building a webpage for renting two-wheelers for a specified period.
- Used **HTML, Vanilla CSS & JavaScript** for front-end development, providing a seamless user experience & optimized performance.
- Incorporated **responsive design** for **mobile app** as well as **desktop**.
- This project is under development, it's currently **deployed** on Vercel a cloud platform, a global CDN.

EDUCATION
